

We've got your team's back

**Packages
from \$89
per employee**

Mole screening in the workplace is a cost-effective way to care for your staff. We can even come to you! Looking after the health of your employees is just smart business! Melanoma is one of New Zealand's biggest killers, but early detection has a very high success rate. NZ Skin Health uses the latest technology and highly qualified specialists for quick and sufficient screening – get peace of mind that your staff is covered.

- ✓ Specialist-led service to provide you with the superior levels of diagnosis and treatment
- ✓ Onsite service minimizes disruption
- ✓ Confidential, reassuring, and comfortable experience
- ✓ Latest technology (digital imaging, artificial intelligence assisted)
- ✓ Screening results delivered back to your staff ASAP – typically within a few days

What we do

At NZ Skin Health we combine advanced skin cancer detection technology with skin cancer expertise to analyse and monitor changes to your skin, so it's an effective way to spot skin cancers in their early stages – early detection and early treatment save lives.

Cutting-edge technology

Dermengine – The world's most advanced software for mole mapping and skin cancer detection. Dermengine's built in artificial intelligence can assist our experts' diagnosis of skin cancers.

Experts in Skin Cancer Detection and Treatment

Our team of Specialists, Skin Cancer Doctors, and Dermoscopists work closely together to ensure the best outcomes for our patients. You will have at least one medically trained professional peer review any concerning lesions to ensure the accuracy of diagnosis.

Why are skin checks so important?

- New Zealand has the highest rate of skin cancer in the world, it is estimated that over 80,000 Kiwis have a non-melanoma skin cancer every year.
- 2 out of 3 New Zealanders will be diagnosed with skin cancer. Each year thousands of melanoma cases are reported to the New Zealand Skin Cancer registry.
- Melanoma is one of the most common skin cancer in New Zealand after breast, colon, and lung cancer.
- Melanoma is more common in older people but it's not just an old person's disease. Melanoma is one of the most common types of cancer in 25-44 years olds.
- Although outdoor workers are more likely to be exposed to solar radiation causing squamous and basal cell carcinoma, higher rates of melanoma are associated with indoor staff due to short bursts of UV exposure.
- The irony of melanoma is that it is both the deadliest cancer and the easiest to treat when caught early.

Our Mission

We want to make skin care detection and treatment easy, affordable, and worry-free for all New Zealanders.

To make this happen, we've gathered together a team of passionate, caring professionals including NZ's top skin cancer experts and specialist surgeons.

Supporting their expertise, we've added the latest detection software and diagnostic equipment.

Put your faith in us and trust NZ's leading full-service skin cancer care clinic.

NZ Skin Health – Workplace Screening

Fast, flexible, and efficient – We can come to you

Our highly trained Dermoscopists can come to your premises. We fly all over the country and can offer multi-day screenings, or send multiple staff to cater to your needs and team size. We can also provide vouchers for your employees to visit our Auckland-based clinic.

We take care of everything

To minimise disruption to your staff, we book them into our system and schedule individual times for them to be seen throughout the day. Each staff member will receive appointment reminders and information on what to expect before the screening date.
